

Colt 4 Turbo Portable Smoke Generator

from Pea Soup

A small, robust smoke generator that produces a persistent, high output smoke

In its basic format, the Colt has the ability to produce a considerable amount of smoke 'off power' using the retained energy within the high mass heat exchanger, allowing an operator to carry a generator from room to room, making smoke as required, without a trailing electrical lead. After being on mains for around 20 minutes, the Colt will generate large amounts of smoke for around 2 minutes off power.

In service with numerous fire authorities world-wide, many NATO forces (including the USN for shipboard training), as well as analytical laboratories and HVAC contractors, the Colt has an enviable reputation for simplicity of operation and reliability.

The Colt 4 Turbo is particularly suited to applications where extremely dense concentrations of smoke are required, or extremely large volumes need to be smoke logged. This is because of its very persistent nature. In this respect, the Colt 4 Turbo is one of the most powerful hand held smoke generators on the market today.

Available with optional remote control.

Compact size, robust construction

Precision, machined heat exchanger, guaranteed for life

Off power capable

Persistent smoke

NATO codified

Features:

- Compact size, robust construction
- Hand portable
- Off-power capable
- Persistent smoke
- NATO codified

Construction:

- Precision, machined heat exchanger, guaranteed for life!
- Utilises aerosol canisters for safe, convenient operation
- Available in 'basic' or 'remote control' versions
- Light and portable

Operation:

- Power consumption: 120V / 230V, 50/60Hz. *Please specify when ordering.*
- Basic format (with off-power facility)
- Remote format (both on-board operation, or remote) supplied with 5 metre remote
N.B. remote control does not function off-power
- Heat exchanger wattage: 2,200 watts
- Warm up time from cold: 4 minutes
- Duration of aerosol at maximum output: 8 minutes
- Smoke output: 0 - 170 m³/min @ 1.5m visibility
- Particle size 0.2 - 0.3 micron, mass median diameter

Mechanical Specifications:

- Height: 20cm (8in.) Width: 14cm (5.5in.) Length: 36cm (14.1in.)
- Weight: 7kg (15.4lbs.)
